

NORRIS FRANK MEYO

Backend Engineer / Fintech & Security Systems

Nairobi, Kenya +254 757 494 163 norrisfrankmeyo@gmail.com
github.com/norrisfrank portfolio-backend-92a8.onrender.com

PROFESSIONAL SUMMARY

Fullstack backend heavy software engineer with hands-on experience building production ready backend systems. Comfortable working across the full backend stack from REST API design and JWT-based authentication to M-Pesa STK Push integrations and PostgreSQL schema modelling. Most of my work lives in Node.js and Express, but I have also built Python-based CLI security tools and contributed to full-stack web applications during an internship. I am particularly drawn to fintech and security engineering because the problems are real, the stakes are high, and the solutions have to actually work. Portfolio best viewed on landscape.

TECHNICAL SKILLS

Languages	JavaScript (Node.js), Python, SQL, HTML/CSS
Frameworks & Libraries	Express.js, REST API architecture, middleware design, JWT (access/refresh tokens), bcrypt
Databases	PostgreSQL, MySQL
Security	RBAC, input validation, token-based auth, environment secrets management, API callback verification
DevOps & Tools	Git, GitHub, VS Code, .env configuration management especially for payment architecture
Methodologies	Modular backend architecture, layered middleware, normalised schema design, production debugging

SOFTWARE PROJECTS

Press'dPretty E-commerce & Custom Product Platform <https://pressdpretty.onrender.com>

Duration: 2026

Tech Stack: HTML, CSS, JavaScript, Node.js/Express, PostgreSQL

My Role:

- Designed and developed the storefront architecture for browsing and presenting press-on nail collections.
- Implemented structured product and customer-facing flows including collections, sizing and profile sections.
- Built a responsive interface optimized for mobile and desktop shopping experiences.
- Structured the application for future integration of payments, custom orders and order management.

KeyFeatures:

- Product catalogue and collection browsing
- Product sizing and fit guidance
- Responsive e-commerce interface
- Customer profile and shopping flows

Sneko AI-Powered Game & Neural Network System <https://sneko-rdgh.onrender.com/>

Duration: May 2025 - Aug 2025

Tech Stack: JavaScript, TensorFlow.js, HTML/CSS, Deep Q-Learning

My Role:

- Built the game engine and real-time gameplay interface.
- Implemented an AI-controlled game mode using a neural network and reinforcement learning.
- Integrated TensorFlow.js for model training and inference directly in the browser.
- Developed real-time telemetry to expose model state, rewards, loss and Q-values

Key Features:

- Human and AI gameplay modes
- Real-time Deep Q-Learning
- Neural network telemetry and training metrics

QR Studio <https://qr-studio-eqqa.onrender.com/>

Duration: Mar 2025 - May 2025

Tech Stack: Node.js, Express.js, PostgreSQL, REST API

My Role:

- Designed the QR generation workflow and configuration interface.
- Implemented dynamic QR generation based on user-provided data.
- Added support for different QR input types and Wi-Fi configuration.

Key Features:

- URL, text and Wi-Fi QR generation
- PNG/SVG export
- Configurable QR dimensions

Norris Frank Portfolio <https://portfolio-backend-92a8.onrender.com/>

Duration: Dec 2024 - Feb 2025

Tech Stack: Node.js, Express.js, PostgreSQL, React, Tailwind CSS, JWT, REST API, Render, GitHub Actions

My Role:

- Designed and implemented the portfolio architecture and project showcase system.
- Integrated technical case studies covering backend architecture, databases and security.
- Implemented responsive frontend components and structured navigation.
- Configured production deployment and environment-based application configuration.

Key Features:

- Project and technical case-study showcase
 - Backend engineering service interface
 - Responsive React/Tailwind frontend
- Production deployment with environment configuration

WORK EXPERIENCE

2D Data Quality Analyst Specialist

CloudFactory / Sep 2025 - Present | Remote, Nairobi

1. Maintained high-accuracy data validation outputs against strict SLA and precision metrics in a production ML pipeline
2. Contributed to machine learning dataset quality assurance, directly influencing model training data integrity
3. Consistently delivered across a 48-hour weekly workload in a deadline-driven, remote environment

Full-Stack Developer Intern

Keemsy Consulting / May 2025 - Jun 2025 | Remote, Nairobi

1. Collaborated on the design and development of the company's internal web application, working across both frontend and backend layers
2. Optimised database queries and API endpoints, improving system response time and reducing redundant calls
3. Contributed to fluid design using express js

EDUCATION

Bachelor of Science in Computer Science

Maasai Mara University / *Expected graduation December 2026*

Relevant Coursework: Data Structures & Algorithms, Database Systems, Operating Systems, Computer Networks, Software Engineering, Cybersecurity Fundamentals, Web Application Development

ADDITIONAL PROJECTS

Full portfolio available at: portfolio-backend-92a8.onrender.com

1. Chamora - is a full-stack management platform built for Chamas (informal cooperative societies and investment groups), handling member contributions, loan management, meeting minutes, and financial tracking through a real-time dashboard. The backend enforces strict access control on all group-gated routes and integrates M-Pesa STK Push for live payment processing with idempotent callback handling.
2. Norry Odyssey - Travel & Tour Platform: a curated tour package website with destination highlights and a clean, responsive UI
3. Titan cargo - A backend logistics platform for managing shipments, drivers, fleet operations, and route assignments. Built with a modular architecture, PostgreSQL data model, JWT authentication, role-based access control, and API-level shipment lifecycle enforcement.
4. GhostNorry - A privately built OSINT suite for tracking and correlating intelligence across IP addresses, phone numbers, and usernames. Tailored exclusively for personal use, with custom reconnaissance modules and a CLI-driven interface designed around specific investigative workflows rather than general-purpose tooling.
